

ASSEMBLY INSTRUCTIONS & PARTS LIST

Product Code: **800-00-69_PHD**

SHARK skid plates are made of extremely strong and durable high-density polyethylene (HDPE) and are precisely designed and manufactured for each specific ATV model. Their installation therefore does not require any drilling or other modifications to the vehicle.

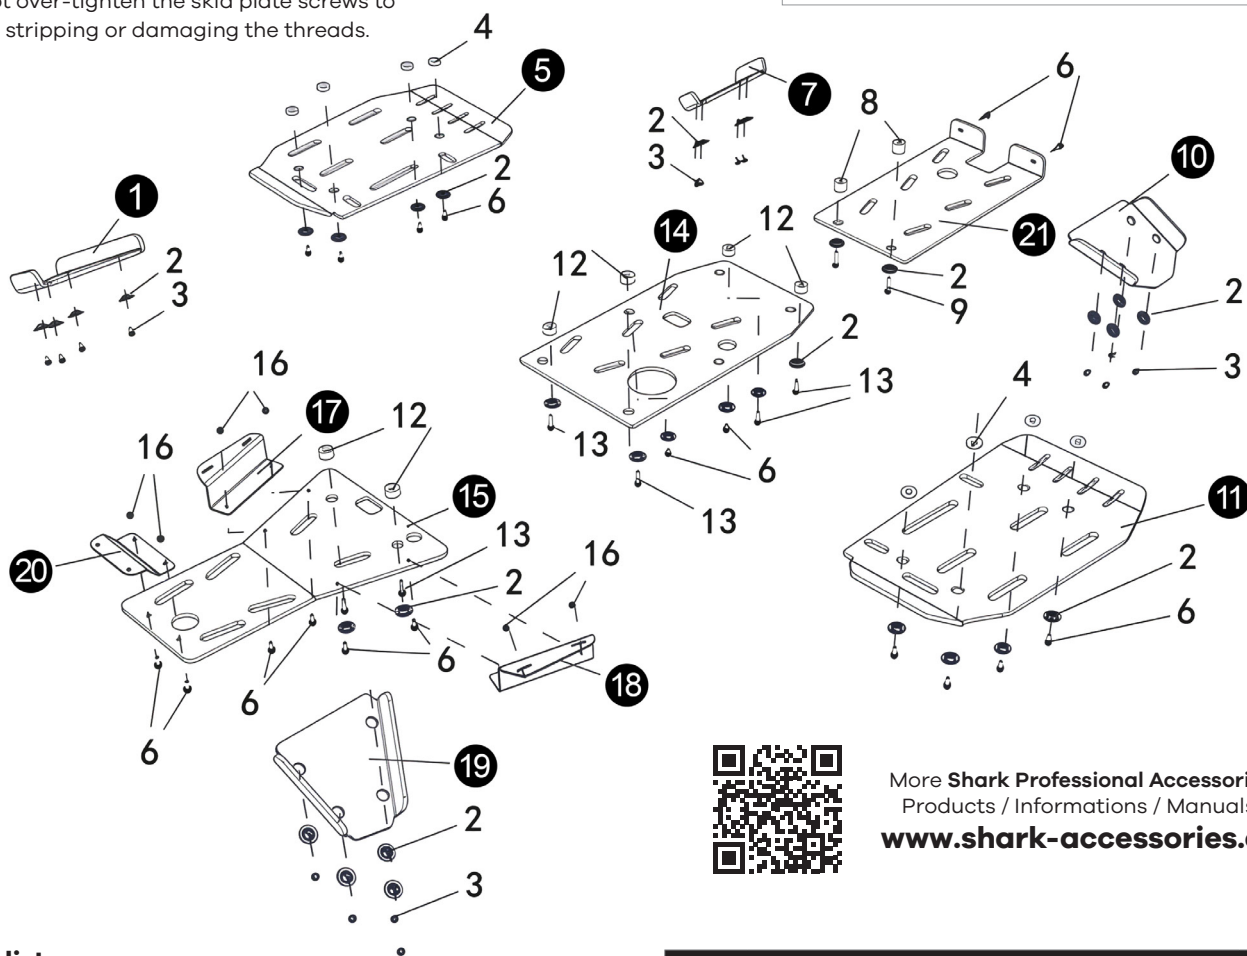

We recommend that installation be carried out by an authorized SHARK dealer or a professional service center to ensure proper fitment of the skid plates, accurate alignment of the components, and secure tightening of all fasteners. In case of any doubt, please contact your SHARK dealer or the official distributor.

When assembling and disassembling the covers:

- Remove the original plastic covers from the chassis that are to be replaced.
- Install the new skid plates according to the diagram below.
- First, tighten all screws only partially by hand so that the skid plates can be aligned accurately.
- Only then tighten the screws gradually and securely.
- Do not over-tighten the skid plate screws to avoid stripping or damaging the threads.
